

AUTOMOTIVE PLANTS CONVEYORS, TRACKS, DOSING

Automotive sector is well known for quality and reliability requirements. For decades **Intza Lubrication Systems** is integrated in many machines that supply this sector (presses, metal cutting, etc.). Additionally, in recent years **Intza Lubrication Systems** can also be found in assembly lines of automotive plants with different kinds of solutions:

1. **Chain and conveyor lubrication** >> the chain system that transports the car o parts of it in the assembly process needs adequate lubrication. **Intza Lubrication Systems** has installed sophisticated oil powdering lubrication system even in process area with temperatures around 210°C.
2. **Track o 7th axis of robots** >> industrial robots mounted over tracks are in continuous movement and they perform much better if the linear systems are properly lubricated. **Intza Lubrication Systems** installs centralized lubrication systems in different production areas such as welding of car-body or assembly.
3. **Grease dosage in assembly workstation** >> automated dosage of grease in small and controlled quantities is a guarantee of correct application.
- 4.
